

Construction Advisory

West Montgomery/Anderson Alley Rehabilitation

Project

Description:

Weather permitting; work will begin on March 7th to remove and replace existing pavement with a 12-foot-wide, V-shaped asphalt pavement surface designed to channelize storm drainage down the center of the alley. The shape of the alley will prevent storm drainage from entering into the private properties of the 400 block of West Montgomery Avenue.

Access to your property will be maintained but temporary delays may be encountered in exiting and entering your driveway. The contractor will limit dust created during construction. Impacts during construction may include: one-way access into and out of the alley and construction noise. There are no anticipated tree impacts.

Due to the recent favorable weather conditions and the contractor's availability, the work has been scheduled with less than the standard two-week notice.

Purpose:

Rehabilitation of deteriorated alley pavement surface and redirection of the storm drainage pattern.

Location:

Alley between the 400 block of West Montgomery Avenue and the 400 block of Anderson Avenue from Laird Street to West Montgomery Avenue.

Timeline:

The work is expected to start March 7 and be completed within four weeks.

Cost:

\$50,000
